

FEELING FLAT? We Can Boost Your Confidence (and Your Cup Size!)

By Cindy Marx; Practice Manager
Raj Plastic Surgery

The female breast is one of the defining characteristics of beauty, femininity and sexuality of a woman's body. Breast augmentation surgery remains one of the most popular plastic surgery procedures performed worldwide. With the FDA approval of the newer silicone gel-filled implants in 2006, women now are able to choose between the saline or silicone gel implants. The silicone gel implants feel more like natural breast tissue without compromising reliability or safety. Which implant to choose is a personal decision made between the patient and her Board Certified Plastic Surgeon.

Breast augmentation surgery has a great impact not only on your body but also on your psychological well-being. Our society today associates femininity of the female form with curves in the right place. Curvaceous breasts enhance the way our clothes fit from sundresses to bathing suits. When a woman feels feminine in her "birthday suit," she exudes confidence regardless of what clothes she wears. So throw out the push-ups, shapers, and inserts; invest in yourself!

It is not only the 20 something's that seek breast augmentation procedures; women in their 30's and 40's seek breast augmentation to regain the appearance of their pre-pregnancy feminine breasts. The baby boomers continue to influence how we age – women in their 50's, 60's and 70's are finally having breast augmentation in conjunction with breast lifts to help regain a more feminine figure. Their children are grown, they continue to be in the work force, and they have more disposable income allowing for an investment in themselves.

A spring surgery can bring you confidence in swim suits and sundresses this summer!

Breast Augmentation procedures are very affordable and recovery is fairly quick. Please call our office for a free consultation. Ask us about our no-interest payment options.
